Input

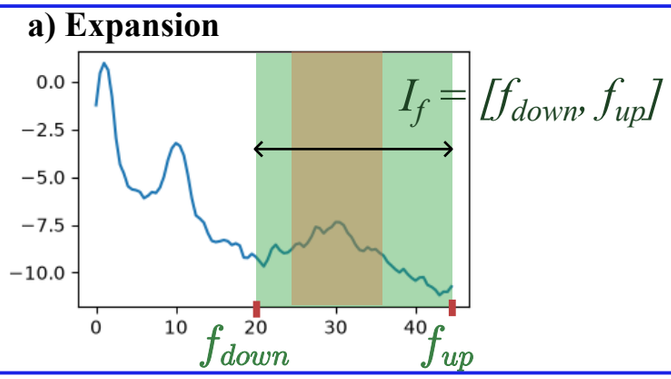

- Signal
- Frequency interval ***I*** for bursts to be attenuated

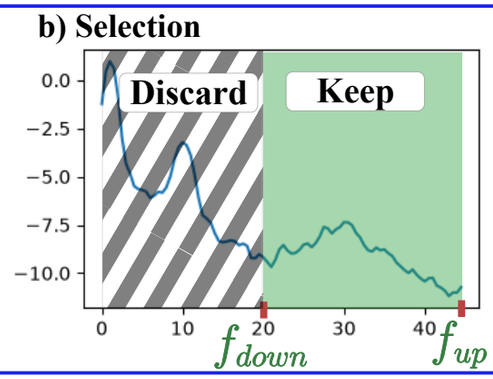

Step 1: Expansion of frequency interval *I*

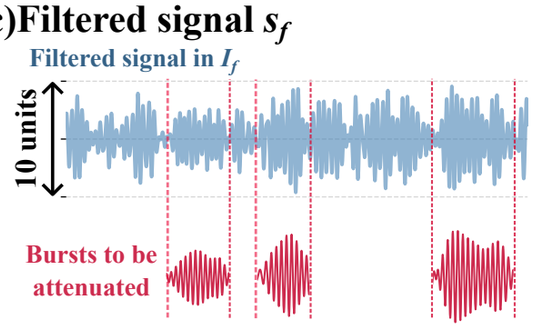

- **a)** Expand frequency interval ***I***
- **b)** Select interval I_f

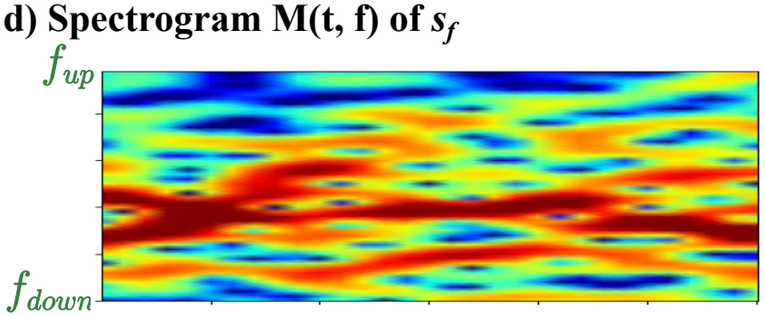

Step 2: Time-Frequency transform

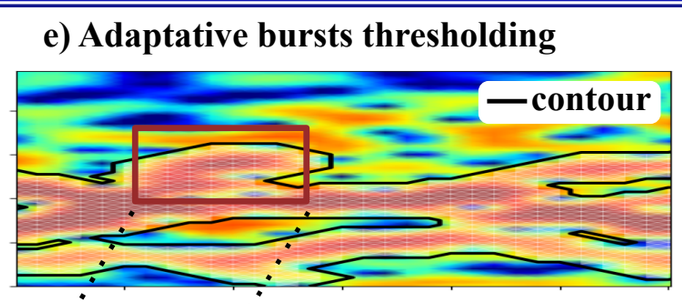

- c) Bandpass filter in I_f
- d) Transform filtered signal

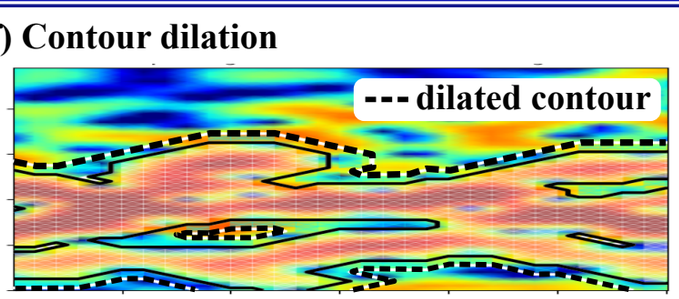

Step 3: 2D Masks construction

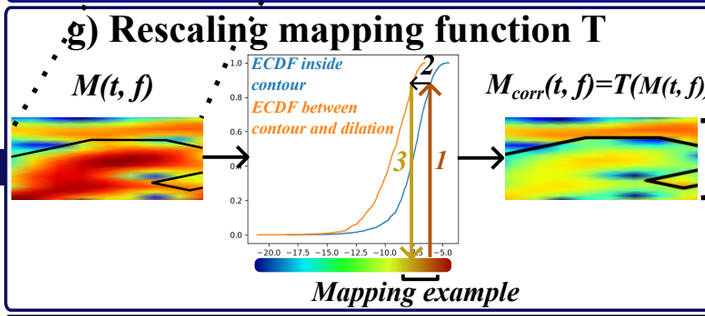

- e) Adaptative bursts thresholding
- f) Adaptative bursts thresholding dilation

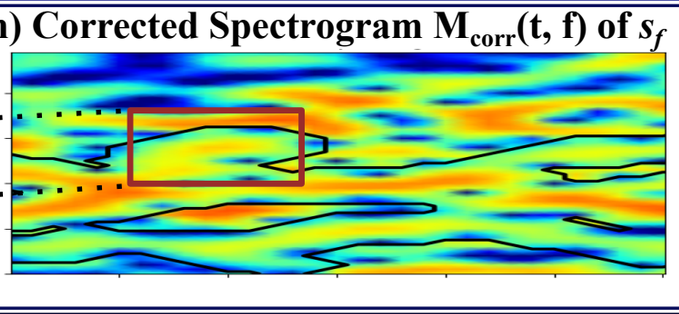

Step 4: Bursts correction

- Rescaling of intensities

Step 5: Synthesis

- Inverse corrected Time-Frequency matrix
